A PMID number allows you to find the article in PubMed.

An NIHMSID number indicates the manuscript has been deposited in NIHMS.

A date in this field means the manuscript was deposited. The NIHMS Person (usually the corresponding author) was sent an email from NIHMS on this date. If empty, the manuscript needs to be submitted to NIHMS.

A date in this field means the NIHMS Person responded to the email from NIHMS and completed the first approval task.

A date in this field means the NIHMS Person completed the second approval task. The PMCID should be assigned soon!

Ignore this field.

Use this info as a starting point to determine the Submission Method for the work (Method A, B, C, D).

NIHMS has sent emails to this person so they can perform approval tasks. Typically this is the corresponding author and it is not always the PI. If this person does not respond to emails, another author can be assigned the tasks by contacting the NIHMS Help Desk.

Note that publications may be listed multiple times on the report if they have multiple PIs or grant numbers associated with them.

Allow NIHMS up to 8-10 weeks to prepare the manuscript for posting to PMC. When it is ready - "NIHMS tagging complete," NIHMS enters the date here & sends a second email to the NIHMS Person.
