Dr. Arnold Welch
Department of Pharmacology
Yale University - School of Medicine
333 Cedar Street
New Haven, Connecticut

Dear Arnold:

I apologize for not having replied to your nice letter of May 15th. Since that time I have been on a merry-go-round of trips and other obligations here, including the construction of a new building, so I am far behind on my correspondence.

I am pleased, indeed, that you enjoyed your trip to St. Louis and was only sorry that Mary could not accompany you. Since you questioned the part that I might have had in this, I would like only to state, Arnold, that this was an award which you had earned. I will admit that I did have something to do with initiating the procedure, but the fact that the award was made had nothing whatsoever to do with my part in this.

I look back to our class in medical school as really a very remarkable one in terms of people it has given to academic medicine and I look upon you as the outstanding member of that select group. Hope you will forgive me for being so honest about my feelings but I do this with real admiration for all that you have accomplished and with real feelings of gratitude that we have had these years of friendship.

With very best regards to you and your good family.

Sincerely yours,

Robert E. Shank, M. D.

vitamins and hormones have been utilized in treating this disease. Frequently encouraging therapeutic results have been reported, (After more prolonged observation and in the hands of objective clinicians, none of these substances have been proved beneficial in the treatment of muscular dystrophy.)

but none of the agents have proved to be beneficial after adequate clinical trial.

Myasthenia Gravis.—

Etiology. — Myasthenia gravis is characterized by abnormal fatigability of skeletal muscle. The etiology remains undefined. The defect accompanying the disease would seem to be one of the myoneural junction in which there is either an insufficiency of acetylcholine at this site or an elevation of the threshold of the motor end-plates with consequent partial block to incoming nerve stimuli. Prostigmine decreases the fatigability of these muscles, as do other inhibitors of cholinesterase, such as physostigmine and di-isopropyl-fluorophosphate.

Pathology. — There are no constantly occurring gross or microscopic morphologic changes to be demonstrated in the affected muscle. However, aggregates of small round cells, lymphorrhages, are often found in the skeletal muscles. Hyperplasia of the thymus or thymoma occurs with relative frequency.

Symptoms. — The disease is not common in infants and children, but when it does occur the first symptoms and signs observed may be those of ptosis or of difficulties in mastication, speech and swallowing. Later the symptoms may extend to muscles of the neck, trunk and extremities. Affected muscles may be capable of contraction only for brief intervals or respond in limited extent to attempts to utilize them. Relaxation of facial musculature results in an appearance of

Muscular response also tends to be weaker as the day progresses.

may meet him.

I hope that sometime on your probably not infrequent trips to New York you will plan to come to New Haven to visit us — we would really like to see you.

Please give Eleanor my best and tell her that I am sorry not to have seen her.

With warm regards —

Sincerely,

Arnold

Dear Bob:

I have now returned to find your letter of May 8 and the enclosed reprints of your article on the experience in the coordinated outpatient program at Washington University. Thanks very much for sending these to us. I should think you would take a great deal of satisfaction out of the fine development you created at Washington. I do hope it goes along with the same vigor it has in the past.

With best regards,

Sincerely yours,

John M. Weir, M.D.

Mrs. Marion W. Weir
Mosley Road
Creve Coeur, Missouri

Dear Mrs. Weir:

I shall be glad to meet with your discussion group on the evening of Tuesday, April 10th.

Many of these problems come before the Food and Nutrition Board for purposes of action and advice to the Food and Drug Administration. Since the Board meets on the 30th and 31st of March, I may have some information to bring to your group.

Very sincerely yours,

Robert E. Shank, M. D.
Danforth Professor of Preventive
Medicine

ST. LOUIS CONSUMER FEDERATION

SAINT LOUIS 4, MISSOURI

Mosley Rd
Creve Coeur, Mo

3/12/56

Dear Dr. Shank -

A group of our Federation members have a small supper discussion group which we use as a sort of research center & testing grounds for our program ideas.

Since we have been working on food & drug administration legislation we have been delving into much in the way of future use of chemicals & other new products in & around the processing of foods. Much is still in the laboratory stage but as consumers we feel we should be looking towards the future so as to be prepared or preparing ourselves for some of the implications as far as food & drugs are concerned.

We hope you will meet with us and give us some light on some of the problems in the field of chemical & other additives to food from the public health point of view -
The date is Tues. April 10th 6:30 p.m. Supper
4416 Westminster - home of Mrs. H. Johnson
(over)

I hope you can attend and that you
will bring your wife also. A question period
follows the discussant's talk which may
be 30 minutes to an hour -

Sincerely,

Marion W. Weer

St. Louis, Missouri

Dear Bob:

I am in receipt of your letter of January 31 -- I may be all wrong but I was of the impression that when I last saw you that you favored the present location for the Clinic, and I am also of the impression that Harry Panhorst, Director of the Clinic now favors this.

There was a meeting Wednesday morning in the Chancellor's office -- Dr. Lowry and Dr. Scott were there -- and this matter was discussed, and again I say, unless I am mistaken, we all agreed (including the Chancellor) that the Clinic should remain where it is, and I don't think we should call in Mr. Shepley's relative or any architect outside of St. Louis to advise us.

I appreciate your interest in writing me and your desire to do what you think is best for the Medical Center, but as written you above, I thought the matter was all settled.

Sincerely yours,

David P. Wohl

December 12, 1955

Dr. Rolla R. Wolcott
Medical Director, PHS
U. S. Public Health Service Hospital
Carville, Louisiana

Dear Dr. Wolcott:

I am very grateful to you for your provision on loan of the Kodachrome slides pertaining to leprosy, as well as the reprints and printed material which you sent. I believe that with this help we were able to provide an effective teaching session. It would have been better, I am sure, had you been able to be present, but we understand that our invitation did not permit adequate time for your preparation.

Again I would like to thank you very sincerely for your assistance in this matter.

The slides are being returned under separate cover.

Very sincerely yours,

Robert E. Shank, M. D.
Professor of Preventive Medicine

April 11, 1955

Williams and Wilkens
Waverly Press, Inc.
Mt. Royal and Guilford Avenues
Baltimore, Maryland

Dear Sirs:

We received only one copy of the galley proof on the book review "Wine as Food and Medicine", by Salvatore P. Lucia. No mistakes have been found in the galley and, therefore, it is being returned to you.

Sincerely yours,

Robert E. Shank, M.D.

Alterations are charged for at the rate of \$5.94 per hour, so it is important to keep alterations to a minimum. Alterations are made most economically if the following principles are observed:

- Don't make an unimportant change (such as inserting a comma) on a galley not otherwise altered.
- If you substitute a word or phrase, make the substitution as nearly as possible the same number of letters as the deleted matter. If this is not done, the balance of the paragraph must be redone.
- When adding new material, put it at the end of a paragraph if possible. The best thing to do is to make a new paragraph of the new material.
- In deleting, try to delete solid blocks of type.
- Transposing words, sentences, or phrases is costly. Transposing entire paragraphs is relatively inexpensive.
- When proof is in pages, any changes except the absolutely essential should be avoided; especially changes which change the length of the page.

Proof Readers' Marks and How to Use Them

All use of proof readers' marks requires a double marking—one in the body of the text at the point of correction, and a corresponding mark in the margin which calls attention to the fact that there is a correction to be made at this point. A correction marked only in the text and not in the margin is very easy to miss.

Following is a sample of marked up proof and a list of the proof readers' marks in general use.

x|↓|⊙|⊗ This is an example of the way proof should be marked. it to cap/#is#
 ✓|c be understood that ✓ this type of marking applies only to marks on proof not #
 m/l.c. on copy—when copy is marked an entirely different method of handling → ital/≡/↗
 ⊙/b.f. is used. Although all of the proofreaders' marks are not used in this example ↗/rom/↗

TO AVOID ERRORS

READ AND FOLLOW THESE INSTRUCTIONS

It is most important that you—

1. Return all proof marked "Original Set" as soon as corrections have been marked. It is not necessary to return "Duplicate" set.
2. Return "Original" set of proofs of engravings and cuts. Check proofs to see that TOP has been indicated properly and that figure numbers are correct. When corrections or alterations are needed on illustrations, mark instructions on "Original" set of engravers proofs and return original illustration copy with the proofs.
3. Mark errors missed by our proofreaders in *red ink*—These are called "Printer's Corrections."
4. Changes made which are different from original copy should be marked in *black ink*. These changes are called "Author's Alterations."
These color differences are necessary so charges can be properly made.
5. Never—under any circumstances—cut the "Original" set of proof.

GENERAL INSTRUCTIONS

Galleys have been read by our proof readers but authors should read proofs for maximum accuracy.

We keep no duplicate proofs and the only way we can locate a particular galley or page is by the location shown on the proof by the location slug.

This is a location slug: **WIDE GALLEY E-66.**

From our standpoint it is one of the most important items on your proof. We have, literally, thousands of pages and galleys in our plant and the location slug is our only way of finding any particular one. Do not, under any circumstances, do anything to the proof which will separate this location slug from the rest of the material on the proof.

This is an identification slug: *586-4-29-52 -G-PAYS- Take 5-14-10a Gal 1—*

It is the method we use to create a separate identity for each one of the galleys we have in work. The identification slug will not always be this complete. The minimum for an identification slug on a galley will be: **G-PAYS-5-14-10 Gal 1.**

If you find it necessary to refer to a particular galley, and galley proof has not yet been returned, we must know the *location*.

If you find it necessary to refer to a particular galley and we have received galley proof we must know the *identification*.

The location we need in its entirety: **GALLEY E-66; WIDE PAGE G-17; WIDE GALLEY PAGE Q-77; COS O-77; HAD CAB F-76, etc.**

The identification we need is the material that is contained in the type of identification slug which is labelled above as "the minimum".

For page proof we need to know the page number and the location when we have not received proof. If we have received page proof all we need is the page number.

The printer is guided by the instructions written on proof. If illustrations and tables are used, see that references to them are placed in margin of galley proof in the approximate position that will be wanted in page makeup.

1-1

Wine as Food and Medicine, by Salvatore P. Lucia, M.D., Sc.D. 149 pp.,

New York and Toronto, The Blakeston Company, Inc., 1954, \$3.00.

In the preface to this book the author states that he has approached his subject with "great warmth and fondness." His enthusiasm is readily apparent to the reader and at times there must be question whether objectivity and scientific accuracy has not been compromised in some measure as tribute is paid to an important and much enjoyed beverage.

The first chapter deals with the chemistry of wine and the process of fermentation. It is both informative and interesting to read. In consideration of the contributions which wine may make as a food, data are recorded giving the calories afforded per unit measure of a variety of wines. Wine is also proposed as a food providing essential mineral elements, of which iron is present in most significant quantity. The author contends that wine may contribute importantly in meeting the daily needs for vitamins of the B complex but no data are given to substantiate this statement. Actually, with moderate intake it is unlikely that this end would be achieved.

The physiologic effects of wine are reviewed and appraisal is made of the opportunities for the use of this beverage in therapy. Undoubtedly, wine could be used more frequently and to good advantage by the physician in prescribing for the needs of his patients. This point is made even more strongly by the author when he states "the generalized vasodilatation, the increased flow of blood to the skin and the mild euphoria wine produces are as necessary as they are gratifying to both the aged and the convalescent."

The book represents a useful compendium on wine. It is readily readable with a literary style somewhat more flamboyant than is usual in scientific or medical literature. There are more than three hundred references in the bibliography. Of this number nearly one-half are to publications which

8/10

appeared before 1930 and indeed one of the most attractive things that the reader will find in the book is the historic detail with which it is embellished.

Dr. L. W. Hackett
Editor, American Journal of
Tropical Medicine and Hygiene
School of Public Health
University of California
Berkeley 4, California

Dear Dr. Hackett:

I am enclosing a review of the book "Wine as Food and Medicine." This book was forwarded to me some months ago for review. I apologize for my long delay in getting the review to you but I have found constructive criticism very difficult for this particular book. Earlier reviews which I had drafted were almost totally deprecatory and I hesitated to send them on to you. The enclosed statement is one which I believe is fair and yet only alludes to the serious questions which I have concerning the authenticity and validity of many statements in the book.

Very sincerely yours,

Robert E. Shank, M.D.

Dear Dr. Shank:

I imagine that you have found your time so occupied that you were not able to write a review of Dr. Lucia's little book on Wine as Food and Medicine. It's not a very important matter, but since Lucia is a friend of mine I told him I would review his book in the Journal. I would still like to have you do it in two or three hundred words, but if you find it impossible, you can send the book back to me, and I will get someone here to do it. I am sorry to bother you about this, but I ought to print something pretty soon if I am going to do it at all.

Yours sincerely,

Dear Dr. Shank:

The publishers have sent me Dr. Salvatore Lucia's new book on "Wine in Food and Medicine" for review in our Journal. I gather from a hasty glance through the book that it has to do with wine in medicine rather than in nutrition. Ruth Huenemann of our School, who met you at a recent meeting, tells me that your interest is both medicine and nutrition, which seems the ideal combination for a reviewer of this book. Would you be willing to review it for our Journal in two or three hundred words, and no hurry?

If you will do so I will send you the book at once, and you can of course keep it.

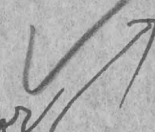

Yours sincerely,

Copy for 

January 3, 1952

Dear Dr. ~~Smith~~:

Had somewhat expected you to phone or write me in reply to my recent letters to you.

Am also wondering whether you received my donation check to the Department of Medicine. The envelope in which it was sent was addressed to you. Have not yet received receipt and it was not among the cancelled checks returned by the bank. Am wondering whether I have your correct business and home addresses. Am sending the original of this letter to your business address and copy to your home.

As promised, have been making special efforts to line up steam road roller for your hobby, the museum. The E. R. Morehouse Company recently advertised two for sale in a small publication known as "Rock & Dirt". We wrote them and attached is copy of their letter of Dec. 27th.

Suggest you could write them that you understand they have been advertising for sale in "Rock & Dirt" one 10 ton and one 8 ton Buffalo-Springfield steam rollers, that you would like to have them send you all the description they can on each of the rollers, that you and some of your friends have as a hobby a museum which includes your collecting old steam equipment and that you would like to have them advise the very lowest price they can quote on each roller for museum purposes or you might want to ask them to advise whether they will consider donating either of these rollers to your museum with the understanding their name will be shown as the donor, - or you may want to write them along some other lines that you have used in the past when writing people having items on hand that you are interested in obtaining for your museum.

Attached is copy of my letter of Jan. 2nd to the St. Louis Post-Dispatch. This ad is scheduled to appear in their issues of Jan. 3rd, 6th and 13th. I also sent similar letter to the St. Louis Globe-Democrat and this ad is scheduled to appear in their issues of Friday the 4th, Jan. 6th and 13th. Also attached is copy of my letter of today to Engineering News Record, which we consider is the best trade journal in the United States for used equipment.

If I receive any attractive offerings in reply to any of these ads, will promptly send them to you. Meanwhile, please phone or write me as to which address you want this information sent.

With kindest regards, remain

Gentlemen:

In reference your communication of December 20th, please be advised that we have one 10 tons three wheel steam roller purchased in 1923. This roller is in fair shape and has been used for scarifying and rolling as late as the fall of 1950.

We also have an 8 ton tandem steam asphalt roller also purchased in 1923 and was last used to roll asphalt this year. We are selling both rollers due to the lack of steam roller operators in this vicinity.

The 10 ton roller has a horizontal boiler and the 8 ton has a vertical boiler. Unable to send photographs as they are under cover. Both rollers are Buffalo-Springfields.

We will sell both rollers for the sum of \$1600.00 F.O.B. Camden, N. J.

SHEPHERDSTOWN, W. VA.

September 30, 1952

Robert E. Shank, M. D.
Department of Preventive Medicine
Washington University School of Medicine
Euclid Avenue and Kingshighway
St. Louis 10, Missouri

Dear Doctor Shank:

The West Virginia Academy of General Practice wishes to express its sincere appreciation for your contribution to the scientific meeting held in Elkins in September 14, 1952.

We who attended the meeting feel that your discussion of the "Newer Concepts Concerning Primary Disorders of the Liver" gave us a sounder approach to the many disturbances we see all too often.

We hope that the Academy may at some future time have the opportunity of having you and Dr. McCaslin speak to us again.

Attached is our check to cover your expenses of ninety-nine dollars and forty-seven cents.

Thank you so much for helping to make our P. G. Sessions in West Virginia a success. I very much enjoyed your discussion and also the social time with you after the meeting. Perhaps we may all get together again during the American Academy meeting in St. Louis next March.

Sincerely yours,

H. Wanger, M. D.

Dr. Donald Roberts
Heavner Building
Elkins, West Virginia

Dear Don:

I thoroughly enjoyed my trip to West Virginia and the opportunity it afforded to visit with you and to talk before the Academy of General Practice. I hope that what was said was of interest to your group. Actually, I was able to touch on only selected considerations of importance in the newer knowledge of hepatic disease.

It was very pleasant to visit with you, Peg, and the family. Please thank Peg for me for the many things she did to make my trip a very enjoyable one. I came away with the impression that life in Elkins must be exceedingly pleasant and your own work rewarding.

I enclose an attached list of my expenses incidental to this trip as you had asked me to do.

The B & O arrived in St. Louis according to schedule, and I was back in my office before 2:30 yesterday - so plans worked flawlessly.

I hope that we will see you in St. Louis in March.

With best personal regards,

Robert E. Shank, M.D.

Elkins, West Virginia

Dear Don:

I apologize for not having answered your letter sooner but I have been on vacation. The vacation was spent at home but with a real effort to avoid the office.

My plan will be to go east by train. I have reservations on the B and O to arrive in Clarksburg or Grafton on Sunday morning, September 14, and to leave at midnight that night for the return trip. Can I get to Elkins by bus from either city? I am sorry that I have to make such a hurried trip but this comes at a time when my commitments here are heavy with the school session beginning on the fifteenth.

The slides that I will plan to use are of the usual size, $3\frac{1}{4}$ by 4 inches. If it will be difficult for you to obtain such a projector, let me know and I will bring one along.

$\frac{1}{2}$ I am looking forward eagerly to seeing you and Peggy soon.

Sincerely yours,

Robert E. Shank, M.D.

Dear Bob:

We are most pleased that you can accept our invitation to speak September 14th. The meeting will be held at the Tygart Hotel from 2 to 4:30PM. The talk to last one hour or ten minutes more if you want it or as needed for questions. You may have the first hour. The other speaker is to be Murray F. McCaslin, M.D. of the University of Pittsburgh. Speaking on Retenal Changes in Internal Disease."

We will be most glad to supply a slide viewer (What size?) movie machine or other teaching aids as needed. The Academy will be glad to pay your traveling and incidental expenses. By car, train or plane as you desire.

The "Newer Concepts Concerning Primary Disorders of the Liver" sounds to the committee as being most worth while to us. We have not had any talks in this area in recent years that would overlap this subject.

Let us know how and when you might arrive. If you could bring the family we will be glad to put you up.

Yours sincerely,

Donald R. Roberts

Dear Bob:

We will be glad to meet you in Clarksburg on Sunday morning the 14th. Please let us know your trains arrival time. We will put you back on the train for return trip from Clarksburg at mid-night.

We wish you could bring the family.

Sincerely,

Donald R. Roberts

Dear Don:

It was good to hear your voice on the phone this morning. The invitation you offered was one which, as you noted, I didn't hesitate to accept. It will be wonderful to be able to see you and Peg again.

I could be prepared to talk on one or another of the following topics:

1. The Myopathies
2. Newer Concepts Concerning Primary Disorders of the Liver.
3. The Problem of Obesity

If you and your committee will decide which of these topics might be of greatest interest and most apropos, I will prepare myself accordingly. Also, if these are areas which have been covered in other of your recent meetings, please do not hesitate to tell me so. Perhaps I could offer alternative suggestions.

I also would like other information, Don, particularly the time allotted for the talk and whether or not a projector will be available.

With kindest personal regards to Peg, you, and your fine family,

Sincerely,

Robert E. Shank, M.D.

Dear Bob,

I am glad that Barry Wood sent you my letter regarding Dr. Walker and am pleased to learn that there is a possibility that an opening suitable for him might be available in the Department of Preventive Medicine.

I would think that the opening which you describe might be attractive to Walker. From what I know of his interests and aspirations, I would think that he might fit into this niche with ease and pleasure. I am sure from the work that Walker has done so far that his interests would lie in fields other than experimental syphilis. I judge this is what would be desired.

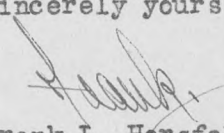

If you are interested in Walker, I suggest that you communicate with him directly. His address is:

Dr. Duard L. Walker
San Francisco Hospital
23rd Street and Potrero Ave.
San Francisco, California

I am very happy to learn that things have gone so well for Eleanor and you in St. Louis. I have heard many favorable comments regarding your activities there.

With kind personal regards,

Sincerely yours,

Frank L. Horsfall, Jr., M.D.

Dear Frank:

Barry Wood has forwarded to me your letter concerning Dr. Duard L. Walker. It is very possible that an additional full-time member will be appointed in the Department of Preventive Medicine during the coming few months. An opening has not as yet been created.

If we are to add a new staff member, our interests will be chiefly in the abilities of the candidate as a teacher of clinical medicine and preventive medicine, and in his interests in carrying on a program of research in a field of his choosing. Just now we are not making a proposal to cover any particular field of medical endeavor.

Dr. Virgil Scott, who is an associate professor in this department, is in charge of the laboratory which deals with bacteriology and infectious disease. Were we to add another person in this field, it would be desirable for the person appointed to work in the same laboratory. This does not imply that he would be a collaborator in Dr. Scott's work; rather, we would prefer to have someone in a somewhat different field. Dr. Scott's chief interests are in fields of experimental syphilis. If you feel that Dr. Walker might fit into this scheme of things, I would be pleased to hear further from you.

Things have gone quite well for Eleanor and me here in St. Louis and we are enjoying the association with Washington University. Please give our best regards to Norma and to your good family. With kindest personal regards.

Sincerely yours,

Robert E. Shank, M.D.

Dear Frank:

Thanks for your letter of December 13 concerning Dr. Duard L. Walker. I do not have a possible vacancy in this department in the Infectious Disease Division at present, since we already have three men besides myself working in this area. However, I will pass your letter on to Bob Shank, who is Chairman of the Department of Preventive Medicine. He will, no doubt, drop you a line after he has seen your letter. I doubt if he has an opening either, but I am sure he will be interested in Walker, and he may know of some other possibilities in preventive medicine.

Thanks for writing. With best regards,

Sincerely,

W. Barry Wood, Jr., M.D.

Dear Barry,

Dr. Duard L. Walker, who was here with me for 2 years and has been for 2 additional years with Dr. Karl F. Meyer, will complete 7 years of postgraduate training on June 30, 1952.

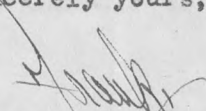

Walker is interested in going on in academic medicine and hopes that he may be able to obtain a suitable position either in a Department of Medicine or Preventive Medicine. I am writing to ask whether you know of any likely openings at your institution which might be attractive for Walker.

For your information I am enclosing a brief biography as well as a bibliography. Although only 3 papers appear on the latter, I understand that he is preparing several additional articles with Dr. Meyer which are to be published shortly.

I have the highest regard for Walker's qualifications and for his abilities both as a clinician and as an investigator. I shall be happy to send any additional details which you might wish.

With kind personal regards,

Sincerely yours,

Frank L. Horsfall, Jr., M.D.
